

Speak UN Prof Dana York, E.M.L.A.

Let's applaud the organizations present here for this most important event. Let's congratulate the delegates that are chosen to contribute the world health.

There are 3 topics about which I want to talk. PBM, victims of violence with PTS, black albinos

1. Photo biomodulation with infrared light in pulse Hz Nogiier mode - the ultimate solution to the health of the world replacing painkillers, and anti-inflammatory pills, stopping bleeding, and creating any tissue regeneration, killing bacteria and viruses.
Infrared transparent cold light penetrates the tissue, in a non-invasive way, activating oxygen in the nucleus of the cell and triggering transport through the membrane, to stimulate protein c reactive, and the soldiers of the body, leading to anti-inflammatory short-term effects and long-term regenerative effects. It is cheap or free and replaces expensive medication.
Second topic
2. I send an Alert to the increasing number of black Albino children who get marginalized, their mothers stigmatized, and they suffer killed on the street. A mother with an albino child is not an unfaithful one, she was malnourished during pregnancy, which is why that albino child lacks melanin to be black
3. An important Contemporary issue today is the life that follows for victims of violence, children and adults, and warzone survivors, either soldiers or civil population – what do they all have in common: post-traumatic stress –
now, why am I competent to talk about this? Is that because of my Ph.D. in research and my Master of Science in Biophysics and Cellular Technology? or the fact that I graduated from the Academy of Distinguished Educators in Clinical Teaching at NYU?
Partially Yes!
I am too competent, by the fact that I am a survivor of violence, brain injury, and PTS. For that reason, I insist on getting to your attention and proposing some actions that can help: Protocols need to be set in place.
No: 1: Protecting the survivor's belongings – bad people probably from the entourage of the aggressor around will stigmatize them rob them and take advantage of them.
No: 2 Happy joyous moments... that is the only treatment,
No: 3 Love, surround them with Love
No: 4 Relocate
No: 5 Keeping Busy ... and forget
I am willing to put all my expertise into action.
I promise you; no matter how cruel the violence was, no matter how cruel the trauma ... they will be fine, and they will make a beautiful future for themselves!
Let there be light! and hope for this beautiful world to be in peace and good health!

Thank you!
